

In the article by Elsener et al. entitled “Risk Factors of In-Hospital Mortality in Patients Treated for Pneumonia at a Tertiary Care Centre in Switzerland” [Respiration. 2020, DOI: 10.1159/000508666], there is an error in Figure 2b. In the legend, “Low LDH” and “high LDH” have erroneously been interchanged.

Below please find the corrected figure:

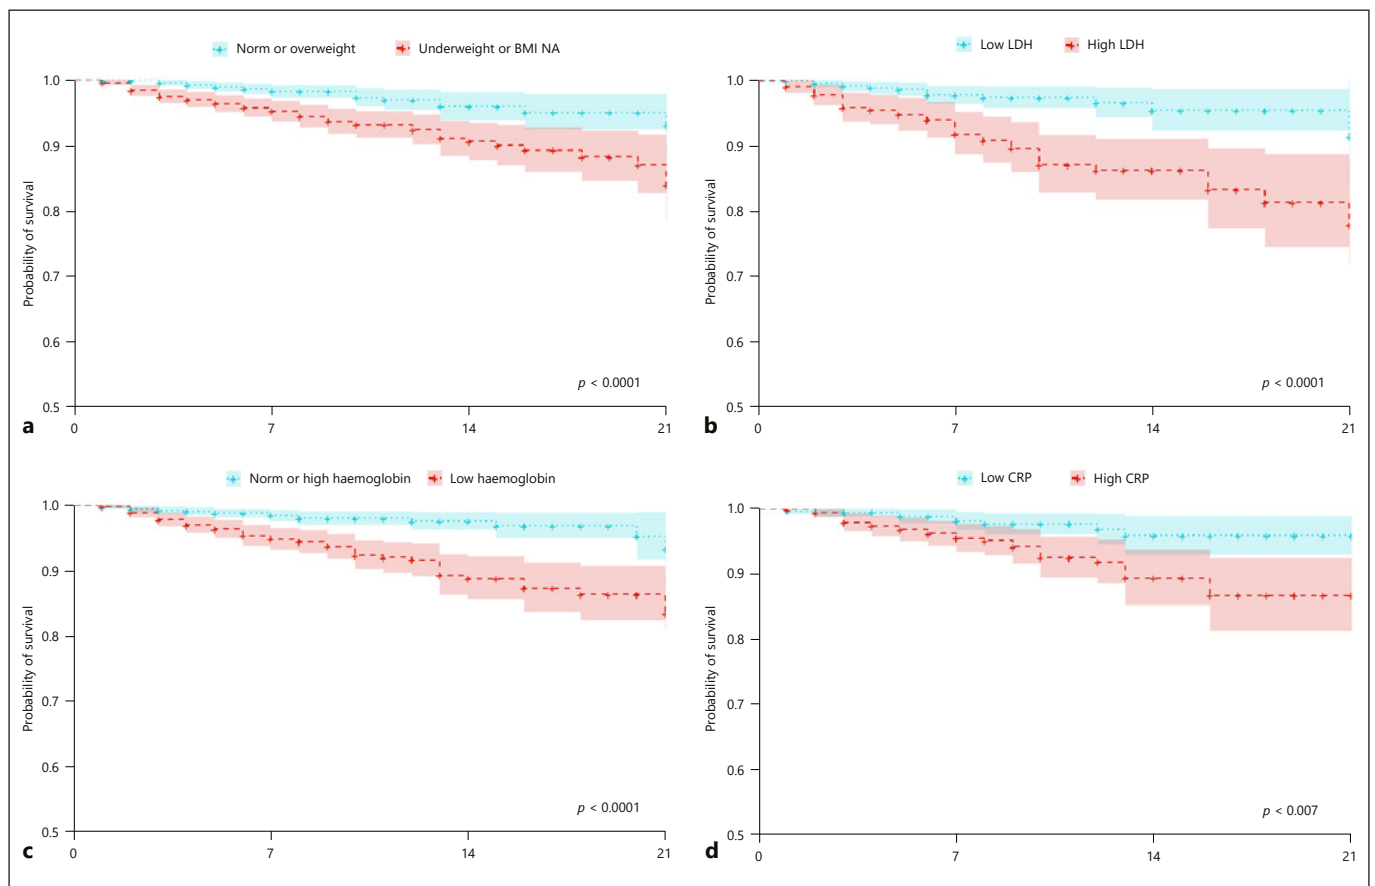

Fig. 2. Kaplan-Meier survival curve of 4 stratified and previously identified factors associated with in-hospital death for 21 days. **a** Comparison of underweight patients (BMI < 18.5 kg/m²) and patients with missing BMI values (BMI NA) versus obese, normal, and overweight patients (BMI ≥ 20 kg/m²). NA, not applicable. **b** Comparison of patients with initial high LDH (>480 U/L) versus

patients with initial normal LDH (≤480 U/L). **c** Comparison of patients with initial low haemoglobin (<11.7 g/dL) versus patients with initial normal haemoglobin (≥11.7 g/dL). **d** Comparison of patients with initial high CRP (>18.12 mg/dL) versus patients with initial low CRP (<4.2 mg/dL).
