

The Journal of Pediatrics Guidelines for Publication of Supplements

Supplements to *The Journal of Pediatrics* are designed to serve an educational purpose for the subscribers and readers of *The Journal* and other healthcare professionals. The goal of supplements is to provide fair, balanced information of high scientific quality. Supplements to *The Journal* are produced through the financial support of medical education companies, pharmaceutical companies, device and equipment companies, and their designates. The following are general guidelines for the publication of supplements:

1. Organizations conducting symposia and considering publication of the proceedings as a supplement should consult with *The Journal* to make certain the educational objectives and value of the symposium are optimized during the planning process. All supplements must be prospectively approved for submission by *The Journal*.

2. Supplements must have educational value and be useful to *The Journal's* readership to be considered for publication.

3. Supplements should primarily emphasize broad topics rather than specific drugs. Supplements devoted to specific drugs or classes of drugs will be considered for publication when there are compelling reasons or unique properties of the drug that justify publication. The topic must be treated in an impartial, unbiased manner.

4. The authors are solely responsible for the content of their manuscripts and the opinions expressed. They are also responsible for the replicability, precision, and integrity of the data and may be asked to sign a statement to that effect prior to publication.

5. All manuscripts will undergo peer review, which will include review by the Editor and at least one reviewer identified by the Editor to consider the scientific validity and reliability of new (not previously published) data (rationale/background; purpose; patients; location; experimental design; intervention(s); results; conclusions; etc.).

6. Manuscripts requiring revision will be returned to the authors in a timely fashion.

7. The review process will be expedited to facilitate timely publication of the proceedings; however, withdrawal of seriously flawed or unacceptable manuscripts may be necessary.

8. Timely publication of supplements depends not only upon the efficiency of the review process by the Editor but also upon the prompt submission of manuscripts by authors. To expedite this process, it is desirable that all manuscripts be completed and turned in when the symposia are held.
