

The American Board of Thoracic Surgery

ABTS Announcement

American Board of Thoracic Surgery

The American Board of Thoracic Surgery's Maintenance of Certification program was adopted 9 years ago. Since that time, there has been a continuous evaluation in the Board's thinking about the overall process, based upon internal discussions and input from our Diplomates.

These inputs resulted in our decision to migrate from a purely knowledge-based multiple-choice exam, using a Pearson Testing Center, to a Mastery Learning Process, using a SESATS format. Diplomates, enrolled in the 10-year MOC process, will fulfill their Part III requirement by completion of a home or office-based learning exam, following the instructions on the ABTS Web site.

There are 100 SESATS questions (primarily taken from SESATS XI), based on your specialty designation (Adult Cardiac, General Thoracic, Cardiothoracic, and Congenital), that you will need to work through as instructed. The exam will now be modular and tailored to your practice—for example, if your practice is 100% adult cardiac, you will only have adult cardiac and critical care questions. You will be able to take the 100-question exam anytime during the months of September and October. For those Diplomates who have used SESATS in the past, the process of working through the questions is the same. For those who are not familiar with SESATS, it might be beneficial to purchase and download SESATS and work through the specialty-specific module. This preparation will give you familiarity with the process. While SESATS may be helpful preparation, it is not required.

The goal of this exam is to provide a learning opportunity using judgement and decision making as well as knowledge. The Board and MOC Committee believe that reading the critique is key to the learning process using SESATS. The Board sincerely hopes that this new MOC Exam format that promotes life-long learning is viewed favorably by our Diplomates.

Everyone at the ABTS thanks you for embracing the primary principle of MOC—life-long learning, which is consistent with our obligation to the public trust.

ABTS Requirements for the 10-Year Milestone for Maintenance of Certification

Diplomates of the American Board of Thoracic Surgery (ABTS) who plan to participate in the 10-Year Milestone for the Maintenance of Certification (MOC) process as Certified-Active must hold a currently valid, full, and unrestricted license to practice medicine. Diplomates must have privileges at a hospital(s) accredited by the JCAHO or other institutions judged acceptable by the Board. Diplomates must also submit letter(s) of reference documenting their level of clinical activity and stature within the surgical community from the VP of Medical Affairs and one other responsible member on staff at their principal hospital. In addition, a valid ABTS certificate is an absolute requirement for entrance into the MOC process. Details on how to renew a lapsed certificate can be found on the Board's Web site at www.abts.org.

The CME requirements are 150 Category I credits over a five-year period. At least half of these CME hours need to be in the broad area of thoracic surgery. Category II credits are not accepted. Interested individuals should refer to the Board's Web site (www.abts.org) for a complete description of acceptable CME credits.

The online MOC exam is now offered in a mastery learning format and can be taken on a home or office computer. The MOC exam must be completed during the time period of September 1 to October 31. Questions on the MOC exam will be modular, based on your specialty, and presented in a self-assessment format.

The Board now requires clinically-active Diplomates to participate in a Practice Quality Improvement (PQI) project within two years of their 10-year Milestone. Additional details on the PQI requirement can be found on the Board's Web site. The Board also requires Diplomates to complete a Patient Safety course, details of which can be found on the Board's Web site.

Diplomates may apply for MOC in the year their certificate expires or, if they wish to do so, they may apply up to two years before it expires. However, the new certificate will be dated 10 years from the date of expiration of their original certificate or most recent MOC certificate. In other words, going through the MOC process early does not alter the 10-year validation. Diplomates certified prior to 1976 (the year that time-limited certificates were initiated) are also required to participate in MOC if they wish to maintain valid certificates.

Information outlining the rules, requirements, and application deadline for the 10-year Milestone of MOC in thoracic surgery is available on the Board's Web site at www.abts.org. For additional information, please contact the American Board of Thoracic Surgery, 633 N Saint Clair St, Ste 2320, Chicago, IL 60611; telephone (312) 202-5900; E-mail: moc@abts.org.
