

Foreword

With the advent of Transcatheter Aortic Valve Replacement the diagnosis and management of aortic valve disease has been at the forefront in cardiovascular medicine.

As I have communicated before from time to time we will publish more than 1 paper if the subject is the same field of cardiovascular medicine. Thus, in this issue of the Journal we will include 3 manuscripts that report different aspects of the consequences and management of aortic valve disease. I hope the readership finds the manuscripts and the topic interesting and I want to thank the authors for these clinical relevant topics in the aortic valve disease.
