

Foreword

Following the last issue of Current Problems in Cardiology that included some of the aspects on the management of aortic valve disease, the issue herein will discuss important basic and clinical features of bicuspid aortic valve aortopathy.

We include two manuscripts, one of the manuscript will discuss the basic and cellular mechanisms of the bicuspid aortic valve aortopathy and the other will delineate the risk stratification and management of bicuspid aortic valve aortopathy.

I hope the readership finds the manuscripts and the topic interesting and I want to thank the authors for reviewing these relevant topics on bicuspid aortic valve aortopathy
