

Foreword

This issue of Current Problems in Cardiology includes 2 manuscripts that tackle the issue of non-common biomarkers of cardiovascular disease.

One of the manuscript reviews a very interesting biomarker that pertains to the reference values for neutrophil to lymphocyte ratio in relation to age and sex in Latin America and the other explores the effects of breast cancer genes 1 and 2 on cardiovascular diseases.

I hope the readership finds the manuscripts and the topic interesting and I want to thank the authors for reviewing these relevant topics on biomarkers of cardiovascular disease.
