

In the article by Nadja Struß et al. entitled “The Effect of a Thixotropic Nasal Gel on Nasal Symptoms and Inflammatory Biomarkers in Seasonal Allergic Rhinitis” [Int Arch Allergy Immunol. 2020;181(5):385–94, DOI: 10.1159/000506129], not interleukin-3 (IL-3) was measured but interleukin-13 (IL-13). The designation was incorrect in the main text (Material and Methods section, paragraph on biomarker and cell analysis) and Table 3. Also, Table 4 presents incorrect numbers and *p* values for neutrophil granulocytes, macrophages and lymphocytes due to copy and paste mistakes. Those values wrongly indicate a statistically significant rise of neutrophil granulocytes and macrophages after allergen challenge. Actually, both cell types did not change significantly, as is correctly described in the results section of the cell analysis in the main text. The corrected Tables 3 and 4 are depicted below.

Table 3. Biomarker combined means with and without gel with *p* values for measurement times and treatment groups
